

FOR IMMEDIATE RELEASE

AUBURN HILLS, MI – April 9, 2010 – Atlas Copco Tools & Assembly Systems LLC (www.atlascopco.us) announces the Pulsor C pulse nutrunner with enhanced control and monitoring features with an ergonomic advantage.

Pulsor C - the pulse tool that can control torque

Pulse tools have long been known for their fast run-down speeds and good ergonomics. Pulsor C offers all the advantages of a traditional pulse tool plus increased accuracy.

More control for higher quality

Pulsor C has the intelligence to adapt pressure automatically to the joint characteristics during set-up to ensure the target torque is delivered. This specialized impulse nutrunner system provides same high torque accuracy in both hard and soft joints with automatic shut-off when the target torque is reached. Monitoring features of the Pulsor C system account for angle, number of pulses, rundown and tightening times, rundown and pulsing pressures.

More control for higher productivity

The built-in intelligence also helps boost productivity. Pulsor C is extremely easy to set up with all adjustments made directly in the software. The system also offers multiple P-set: a single tool provides up to 100 different P-sets.

More ergonomic for higher output

Because Pulsor C is reaction-free, it does not need a reaction arm and can be operated with just one hand at high torques with its well-balanced, compact, and light-weight design. With low noise and vibration levels, Pulsor C is a tool that offers good all-around ergonomics.
