

Atlas Copco

Automan AB (2-10 hp)

Professional Piston Compressors

A solid, robust and reliable compressor for trouble-free operation

1. Pressure reducing valve with quick coupling

The manually adjustable pressure reducer is equipped with quick coupling so it only takes seconds to add a new application to the compressor.

2. Start/stop/auto switch

The built-in, adjustable pressure differential switch allows the compressor to run automatically and maintain a minimum set pressure in the air receiver, giving peace of mind to the operator.

3. Dual purpose belt guard

This solid belt guard not only offers protection for the belt, but also directs cool air over the complete block. This means superior cooling in high ambient conditions.

4. Block

High quality slow running pump equipped with aftercooler. The combination of aluminium and cast iron ensuring a long lifetime.

5. Tank

The Automan's tank is powder coated, giving it the best protection against damage and corrosion.

6. Handle

Full handle with rubber grip. Designed for the best ergonomy.

7. wheels

High resistance wheels and movable front wheel with brake.
