# GAS AND PROCESS TURBO OIL PLUS

Specially designed Turbo Oil is developed to run exclusively in Atlas Copco turbomachinery, delivering top reliability and performance.

**P**roviding effective lubrication is vital to various parts of your compression process. Every part of your machine and process is custom-engineered, so you should choose a lubricant that has been specifically designed for that equipment.

Designed for high efficiency, Turbo Oil Plus is a premier lubricant from Atlas Copco Gas and Process. It ensures that your machine will operate at peak performance and deliver maximum reliability. Our oil tolerates the traces of contaminants that can otherwise often lead to blocked oil filters. It also offers high resistance to foaming, rapid air release and provides excellent water shedding and corrosion protection.

Using Atlas Copco's Turbo Oil Plus, you receive a globally-controlled and quality-designed lubricant that perfectly matches your equipment.

## Turbo Oil Check: A 'Health Report' for Your Oil

Regular oil analysis is a critical part of your preventive maintenance activities. Supporting these activities, Atlas Copco's Turbo Oil Check is a "health report" for your lubricant – and the entire machine. The result: Monitoring your oil conditions helps keep your production running smoothly and reliably; you are also able to identify potential machine failures before they become critical.

When ordering Turbo Oil Check, you will also receive a sample oil kit from Atlas Copco. The oil sample you extract is sent to our laboratory for analysis. Soon after, you will receive a detailed laboratory report with a recommendation for further action.

Ultimately, Turbo Oil Check gives you the security and the peace of mind that your equipment and lubricant are in optimal working condition.

## Benefits of our Turbo Oil Check:

- Monitoring of machine's operating efficiency
- Quick results of analysis
- Minimize downtime
- Planned and scheduled maintenance fine-tuned to your oil analysis
- Helps assess condition of your equipment

## TURBO OIL PLUS BENEFITS

- Rapid air-release characteristics
- Exceptional oil life
- Globally controlled quality
- Oxidation stability several times better than the industry standard
- Ensures reliable machine performance and wear protection
- High system efficiency

**"With Atlas Copco's Turbo Oil Plus, you receive a globally controlled and quality-designed lubricant that perfectly fits your equipment."**
