

PREVENTIVE MAINTENANCE PLAN

Atlas Copco Gas and Process is your experienced crewman, constantly adjusting the trim to ensure efficient operation.

Atlas Copco

PREVENTIVE MAINTENANCE PLAN

Our plans provide on-time specialist service combined with premium-quality, genuine Atlas Copco parts.

Machine maintenance is critical for your production but planning and organizing a maintenance visit takes a lot of time. A Preventive Maintenance Plan from Atlas Copco Gas and Process reduces your Total Cost of Ownership. It ensures the best level of maintenance resulting in an increased availability and top reliability of your machine. Equally important, it also minimizes the time and effort you need to invest into planning and organizing.

A Preventive Maintenance Plan offers on-time servicing by specifically trained Atlas Copco field service personal – in combination with our top quality genuine parts.

Factoring in the circumstances and requirements at your site, our maintenance schedule is tailored to fit your needs. This, ultimately, gives you more uptime, better energy efficiency and increased reliability. Our fixed periodic fee provides transparency. From day one until the contract's final year, you have full oversight on your maintenance budget, and it will remain at the same level for the duration of the contract.

Providing Different Service Levels

A dedicated Atlas Copco field service technician or engineer will visit your machine once a year. The contract follows our recommended Preventive Maintenance schedule, which includes different levels of service, all customized to your machine and application.

This also includes an overhaul that entails replacement of critical components, with the option to refurbish replacement parts. Parts that require replacing are of course covered by your fixed payment.

If our field service specialists identify problems that could affect your production, they will propose a course of action in addition to maintenance. The goal is to make sure there is no lost production time. And, if you need urgent repairs carried out, you will receive priority assistance.

In case you are looking to start a maintenance plan with an overhaul or need an overhaul performed on a specific date within a short timeframe, our maintenance plan can flexibly adapt to your requirements.

Simply contact your local aftermarket sales specialist to further discuss your requirements.

PREVENTIVE MAINTENANCE BENEFITS

- Lowest Total Cost of Ownership through increased availability and reliability of your machine
- Significant cost savings due to an efficient, well-maintained machine
- Easy budget planning for entire duration of contract
- Fixed periodic fee (includes spare parts, labor, and travel costs)
- Detailed reporting and advice per service intervention
- Machine overhaul is part of the service plan
- Spare parts order and intervention planning is performed by Atlas Copco

“By signing up for a maintenance plan with Atlas Copco, you can plan and organize your complete maintenance program for the upcoming years – all in one simple step. In addition to efficiently organizing your maintenance it also reduces your Total Cost of Ownership.”
