

ATLAS COPCO RAILWAY AIR SYSTEMS

Piston Compressor
LER/LTR/LFR 3-10

Sustainable Productivity

Atlas Copco

i *Reliable piston performance*

Exceptionally reliable at a low cost, LER/LTR oil-lubricated and LFR oil-free aluminum piston compressors are built for high performance and extended lifetime even in the harshest ambient conditions. Available from 140 to 1100 l/min free air delivery.

FEATURES AND BENEFITS

Space-saving design

- Minimized footprint with a single access side for maintenance and installation.
- Very compact directly-coupled hydraulic motor.

Enduring performance

- The compressor is designed, built and tested to meet the toughest conditions in railway applications (extreme climatic conditions, high humidity, and shocks and vibrations).
- Built in accordance with international railway standards.
- Proven railway technology used in various applications worldwide with a robust design similar to the railway industry.

Reliability and durability

- Minimum amount of moving parts.
- Corrosive resistant materials like stainless steel and aluminum.
- Long service intervals.
- Low maintenance drive concept.

Flexible and easy installation

- Plug and play system.
- Easy access to main connections.
- Integrated load/unload, blow off and non-return valve.

- 1 Optimized fan assembly for efficient cooling and optimal compressor performance.
- 2 Railway qualified vibration dampers for a minimum transfer of vibrations from and to the compressor package.
- 3 High performance finned tube inter- and aftercooler.
- 4 Load/unload valve with integrated blow-off function and non-return valve for low starting torque and easy control.
- 5 Top quality direct drive aluminum LER/LFR/LTR compressor block in a V-arrangement, for a compact and lightweight installation, high performance and extended lifetime even in the harshest ambient conditions.
- 6 High efficiency industrial air intake filter for trouble-free operation.
- 7 High efficiency hydraulic gear motor with superior performance and low noise levels, working even at high hydraulic operating pressures.
- 8 Hydraulic connections according to international standards.

VARIANTS

High-pressure compressor variant

- Two-stage up to 30 bar.
- Equipped with intercooler for improved efficiency.

Oil-free compressor variant

- Where oil should be avoided.
- Environmentally friendly oil-free piston.
- Less maintenance.

OPTIONS

- **Heavy duty inlet filter** For efficient operation in dusty environments and longer maintenance intervals.
- **Railway-qualified vibration dampers** For a minimum transfer of vibrations from and to the compressor and motor.
- **Different selection of hydraulic gear motors** For an optimal fit between the performance of the compressor and the available hydraulic flow and pressure.
- **Protection canopy** To protect the compressor from big external particles and to be able to place the compressor outside.

TECHNICAL SPECIFICATIONS

Compressor type	Maximum working pressure		Effective working pressure	FAD at effective working pressure and minimum speed of 1200 rpm (40 Hz)			Installed recommended shaft power		FAD at effective working pressure and maximum speed of 1800 rpm (60 Hz)			Installed recommended shaft power

Reference conditions:

Absolute inlet pressure: 1 bar (14.5 psi)

Intake air temperature: 20 °C (68 °F)

For the higher pressure variants, the effective working pressure is 12, 15 and 20 bar, see data above
 Mean noise level measured according to ISO 2151/Pneurop/Cagi PN8NTC2 at 4.6 meter free field
 Unit performance measured at a standard unit (before dryer) according to ISO 1217, Annex C, latest edition

2935 0952 41 - Subject to alteration without prior notice.

Never use compressed air as breathing air without prior purification in accordance with local legislation and standards.
