TENTEC AERO WT BOLT TENSIONERS FOR WIND TURBINES

The worldwide standard for wind turbine bolt tensioning tools.
We offer a range of Tentec bolt tensioning equipment specially designed for use on Wind Turbines.

The Aero WT range comprises of bolt tensioning tools suitable for a complete wind turbine bolting installation or maintenance programme on many different types and models of wind turbines.

By listening to customer requirements these feature rich, powerful bolt tensioning tools are packed full of operator requested features including quick release swivel fittings, automatic piston return and intuitive operation.

The products are manufactured from aircraft quality high strength tensile steel and are compact and lightweight for ease of handling.

**Support**

Tentec bolt tensioning tools have been supplied to the wind industry for over 15 years. We have developed a class leading support and advise system

- Quick Delivery, Local Stock
- On-Site Support, Telephone Support
- On-Site Training, Technical Advise
- Easy On-Site Tool Maintenance

**Safety & Reliability**

Integrated into the design of Aero WT tensioners are multiple enhanced safety features including mechanisms to remove the hazard of premature puller failure. In addition we have developed a class leading high pressure seal technology. This mature seal technology is industry proven and offers many 1000’s of reliable and safe pressure cycles.

---

**BOLT TIGHTENING SOLUTIONS**

**Why Use AERO WT - Wind Turbine Tensioners?**

**Real World Experience**

Tentec Aero WT tensioners have been continually developed over a 15 year period. We know all the difficulties associated with wind turbine bolt tensioning. Every design feature of these tools is there for a good reason.

**Versatile**

The Aero WT Series consists of a purpose designed tools for every bolted joint on a Wind Turbine.

**Adaptable**

Aero WTB Tensioners are profile cut at the base to ensure they fit onto as many applications as possible. This interchangeable profile cut spacer gives the tensioner the flexibility to be used on many different applications.
TENTEC AERO WTB TENSIONERS

Fully aware of the difficulties associated with wind turbine blade tensioning, the new Tentec Aero WTB is a purpose designed range of hydraulic bolt tensioning tools to suit most wind turbine bolting applications. All WTB Tensioning tools have the capacity to achieve the specified proof load requirements as detailed in EN ISO 898-1:1999 and ASTM A490M for grade 10.9 Bolts. These feature packed tensioners have been designed with rapid tensioning in mind and offer a safe, reliable and consistent method to simultaneously tension many bolts.

Features & Benefits

**Automatic Reset**
Internal heavy duty springs automatically reset the tensioner once the pressure has been released.

**High Life Puller**
All Aero WTB tensioners have a device that ensures the tool fails safely in the unlikely event of a puller failure.

**“Snap Down” Nut Drive**
To increase speed all Aero WTB tensioners are fitted with a spring loaded device that automatically engages the tensioner drive socket with the hexagon nut.

**Grip Surface**
For easy user handling

**Optional Cycle Counter**
For maintenance scheduling purposes all Aero WTB Tools offer an optional mechanical pressure cycle counter.

**Swivel Connection**
360º swivel operation allows the hydraulic hoses to be positioned in the best possible position to allow open access to the tensioning tools.

**Geared Nut Run Down**
The inclusion of a gear nut rundown mechanism offers a very rapid and consistent way of seating the hexagon nuts during the tensioning procedure.

**Best Fit**
The interchangeable profile cut spacer at the base of the tool gives the tensioner the flexibility to be used on many different applications.

BOLT TIGHTENING SOLUTIONS

Aero WTB Applications

- Rear Main Bearing
- Nacelle Frame
- Nacelle/Yaw Bearing
- Blade to Bearing
- Front Main Bearing
- Intermediate Tower Bolting

All WTB Tensioning tools have the capacity to achieve the specified proof load requirements as detailed in EN ISO 898-1:1999 and ASTM A490M for grade 10.9 Bolts. These feature packed tensioners have been designed with rapid tensioning in mind and offer a safe, reliable and consistent method to simultaneously tension many bolts.

### BOLT TIGHTENING SOLUTIONS

We have many years experience of designing bespoke bolt tensioning tools for instances where standard tools are not suitable. Contact us for more information.

![Bolt tightening tool in use](image)
**TENTEC AERO WTF TENSIONERS**

The Tentec Aero WTF is a purpose designed range of hydraulic bolt tensioning tools developed and designed to suit most wind turbine foundation bolting applications. The Aero WTF tensioning tools can be supplied to suit many different All Thread Bars and the more conventionally ISO metric and Imperial Unified thread forms. These feature packed tensioners have been designed with rapid tensioning in mind and offer a safe, reliable and consistent method to simultaneously tension many foundation bolts. The Tentec Aero WTF range of tensioning tools have been fully site evaluated in the wind energy industry.

**Suitable Load Capacity for Grade 75ksi & 150ksi - All Thread Foundation Bolts.**

**Features & Benefits**

- **Long Ram Stroke**
  The Aero WTF range of tensioners offer up to 25mm piston/ram stroke capability

- **Handling Straps**
  For easy user handling

- **“Snap Down” Nut Drive**
  To increase speed all Aero WTB tensioners are fitted with a spring loaded device that automatically engages the tensioner drive socket with the hexagon nut.

- **Swivel Connection**
  360° swivel operation allows the hydraulic hoses to be positioned in the best possible position to allow open access to the tensioning tools.

- **Seal Reliability**
  Class leading high pressure seal technology

- **Geared Nut Run Down**
  The inclusion of a gear nut run-down mechanism offers a very rapid and consistent way of seating the hexagon nuts during the tensioning procedure

**25mm(1”) Ram stroke for ‘One Pull’ Tensioning**

Due to the unusual length of foundation bolts and the methods used to anchor the bolts into the foundation structure, it is usual to experience relatively large amount of bolt extension during foundation bolt tensioning. For this reason it is very important that the bolt tensioning tool used has plenty of piston/ram stroke capacity. The Aero WTF range of tensioners offer up to 25mm piston/ram stroke capability for “One Pull” uninterrupted tensioning. Shorter stroke foundation tensioners are available from Tentec to be used where bar protrusion is limited.

**Long Stud Protrusion Models**

The amount of thread protruding from a foundation bolt nut can vary significantly from turbine to turbine. To overcome this variation the Aero WTF Bolt tensioning tool is available in both short and long stroke variations. An elliptical WTF tool is also available for use when clearance between the bolt and tower wall is restricted.

**Short Stud Protrusion Models**

When the stud protrusion is limited, the long stroke tensioners may not be suitable, in this instance a short stroke WTF tensioner is available.
