One controller - One platform

Power Focus 6000 increases your flexibility in rebalancing assembly lines. By having 6 Virtual Stations you can connect up to 6 Atlas Copco tools to the same controller. Electrical tools or manual wrenches – simpler installation, easier production integration, less floor space utilization and a lower environmental footprint.

Smart Wireless Wrench

Mechatronic wrenches combine productivity of a click wrench with traceability of an electronic one. Using the mechatronic wrench series you are able to get access to inaccessible joints for operators and add full traceability with trustable results.

Simpler controller

Manage your entire tightening process with one of our two available controllers. Focus 61 is able to operate 2 Virtual Stations simultaneously in order to easily handle multi-operator applications.
