

THE ALL-IN-ONE SOLUTION
FOR SELF-LEVELING MEDIA

Scheugenpflug LiquiPrep

CONSISTENTLY HIGH FEEDING PERFORMANCE

HOMOGENEOUS AND BUBBLE-FREE POTTING MATERIAL

LONG SERVICE LIFE THANKS TO
INTELLIGENT DIAPHRAGM FEED PUMP

Material preparation and feeding unit
for self-leveling media
LP804

For one and two-component available

MATERIAL FEED FROM

Pails

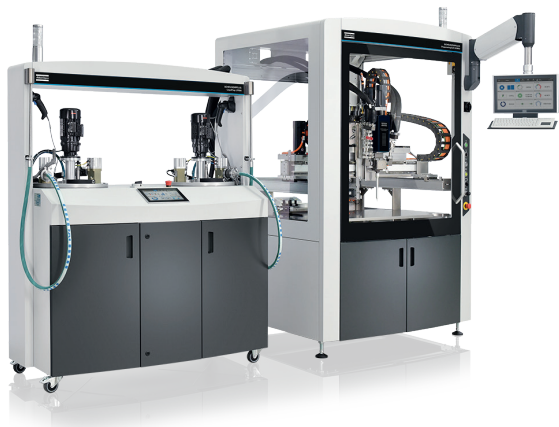

Cartridges

Self-leveling potting media ✓

THE ALL-IN-ONE SOLUTION
FOR SELF-LEVELING MEDIA

Scheugenpflug LiquiPrep

Product data

Model		1C	2C
Dimensions [mm]	Width	1000	1500
	Depth	770	
	Height	2050 ¹⁾	
Tank models ²⁾ [l]		50	50/50
Delivery volume diaphragm feed pump [ml/stroke]		100	
Evacuation rate vacuum pump [l/min]		267	
Final vacuum pressure [mbar]		2	
Agitator speed [rpm]		39	
Temperature adjustable upto [°C]		80	

¹⁾ Incl. signal lamp

²⁾ In the tank models listed, even minimum quantities from ⁵ liters can be processed reliably.

TOP MATERIAL QUALITY EVEN FOR DEMANDING DISPENSING TASKS

There's no denying it: Electronic components have to work. An optimal dispensing performance as well as an absolutely homogeneous and bubble-free material are the prerequisites for this. In view of increasing requirements, however, more and more adhesives, sealants and potting compounds with very special properties are coming onto the market, requiring adjusted preparation and feeding units.

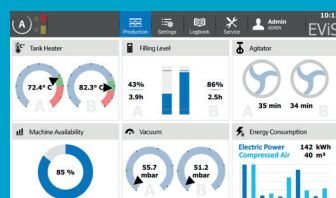

The LiquiPrep LP804 enables process reliable preparation and feeding of self-leveling potting materials with a viscosity of up to 70,000 mPa·s. Processes such as homogenization, tempering, circulation and evacuation can be used to specifically influence the processing properties of the medium.

The heart of the LiquiPrep LP804 is an intelligent diaphragm feed pump. Sensors individually determine the degree of filling, ensuring a continuously high feeding performance. The pump also offers significantly increased wear resistance and by extension a long service life.

In addition, pump maintenance can be carried out by the operator themselves. The ergonomic front with easily accessible maintenance doors offers improved operating convenience. The optimized arrangement of the relevant system components also ensures efficient handling and easier integration into existing production environments.

In combination with continuous process monitoring, the LiquiPrep LP804 ensures cost-efficient plant operation with optimal performance throughout the entire service life.

DIGITAL PROCESS MONITORING

- Simple plant control thanks to user-friendly interface design
- Quick activation of functions
- Easy adjustment of process parameters
- Customizable user management
- Networking capability
