StartUp

Installation services

Starting a new operation requires demanding planning, investment and training. Getting started quickly and smoothly ensures you're delivering value from the first day. Our start-up service solutions ensure that customers' equipment and software are 'right first time', whilst also ensuring it delivers the optimum quality level and cost efficiency.

StartUp

Installation services

A trouble-free and efficient start of operations

Through a globally standardized and certified process for every step from programming to training, you will get the optimum results from your Atlas Copco equipment and software. Get it right the first time, saving time and money.

What we provide

- Trouble-free and efficient start of operations
- Reduced setup time and lower costs
- Training of operators
- A globally standardized and proven process

Atlas Copco

Maintenance solutions

Atlas Copco can manage your entire maintenance cycle, while supporting you with preventive maintenance programs. Our maintenance solutions help you optimize performance, decrease production downtime, whilst ensuring the right quality of your products. All within a controlled maintenance cost.

Service Level Agreements - Preventive maintenance programs Optimize performance and efficiencies

A modular set of maintenance solutions to optimize performance and efficiencies, decrease production downtime and ensure quality.

What we provide

- Reduction of maintenance and repair time
- Global best practice processes and service certificates
- Minimization of running costs and production risks

Service Level Agreements for dispensing, riveting and fastening equipment

Protect

With our Protect service agreement, we support your maintenance activities with regular check-ups of the systems.

What do you get?

- System inspection and optimization
- Complete overview of technical status
- Overall maintenance schedule
- Optional access to EasyRepair program

Stability

Our Stability plan includes mechanical maintenance tasks performed by our technicians, following a customized schedule.

What do you get?

- All the benefits from the Protect contracts
- Fixed maintenance costs
- Defined mechanical spare parts
- Reduced planning efforts

Uptime

Let us provide you a full-service maintenance and fast-troubleshooting by our dedicated on-site personnel.

What do you get?

- All the benefits from the Protect & Stability contracts
- On-site repairs and re-fill of consumables
- Fast troubleshooting by on-site technicians

Machine Capability Analysis

Secure accuracy and quality

Verification and documentation of accuracy and repeatability of quality relevant parameters for a new or modified machine.

What we provide

- Optimal parameterization for high quality & safety
- Essential part of full process traceability
- Evidence over application accuracy & constant maintaining of mixing ratio

Repair Center

Rapid, easy repair and maintenance strategies tailored to your needs

Our Repair Centers offer high quality repairs with original spare parts. Choose the repair strategy that suits you best and stay in control of your budget.

What we provide

- Plannable costs and time
- Qualified test reports
- Extended warranty
- Sustainable repairs

Optimization

Consultancy and training services

In your production, there are many factors which might affect the right performance of your equipment, such as operators, materials, joint conditions and software. Through our optimization services, we offer the possibility to improve assembly processes while optimizing performance.

Application optimization services Optimize your process and performance

Make sure you make 100% usage of our system's capabilities. We perform applications inspection to guarantee the quality and efficiency of your processes.

What we provide

- Reduced material waste, energy consumption, and wear-out
- Real costs savings
- Less wear-out and increased lifetime of your components
- Reveal possible needs for training

Optimization

Training services

Improve quality and reduce downtime

We are constantly developing our customer training for both classroom and digital.

Having well-trained operators, line engineers, and quality people in your operations helps improve productivity and quality.

Optimization

Upgrade services Keep all systems up to date

Let us provide you with technology upgrades or remodeling according to new specifications.

What we provide

- Analysis of the current system condition
- Transparent cost breakdown of necessary changes
- Complete overhaul of re-used components if needed
- Commissioning and briefing

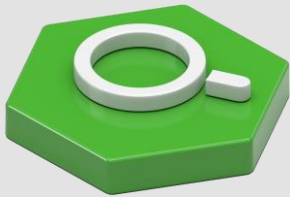

Data Analysis

Join the Smart Factory revolution

Applying advanced analytics and machine learning to your production data, combined with our expertise knowledge, we identify and proactively address emerging risks before issues occur. Our data analysis solutions enable you to improve quality, uptime and first-time-through production.

ToolsNet 8 - On-premises traceability solution

Long-term traceability and in-depth investigation

ToolsNet 8 is a data collection software that can be tailored to specific needs, based on reliable production data collection and aimed to provide simple production analysis. ToolsNet can monitor incoming data and alert when programs are out of statistical control, operations with too many faults, and tool events related to hardware issues.

What we provide

- Long-term traceability
- Production reports
- Manual trend notifications (via email)
- Manual in-depth investigation
- Advanced analysis tool for expert users
