# Easy Restart

We support you with the preparation to restart your production.

# Easy Restart

With **Easy Restart** we support you with the preparation to restart your production – reliable and simple. Our service technicians take care of your tools and work stations for a trouble-free restart of your production.

The following services can be performed as part of **Easy Restart**:

- Cleaning of tools
- Charge of batteries
- Function test of the tools
- Check of the parameter settings and the communication toward the controlling systems
- Creation of backups
- Test tightening to ensure data transfer (e.g. to ToolsNet)

Of course, the deliverables can be adapted according to the individual needs of your production.

Optionally, different optimization modules can be added to **Easy Restart**:

- Result Scan – Evaluation of tightening results including recommendations to optimize the angle limits
- Monitoring Setup – Set-up of angle limits
- Parameter Optimization – Optimization of one parameter set
- Tool test/MCT – Proof of machine capability

**Interested? Please contact your service sales responsible to request an offer.**

Our on-site services will be performed in compliance with the current regulatory situation as well as the established safety regulations on-site.

## Recommendation for cleansing of electrical equipment

Due to the current situation, we have been frequently requested to suggest appropriate methods to clean the equipment.

For EC tools, controllers and accessories such as operator panels or torque arms (material: carbon/aluminum) we recommend:

- **None** of the equipment should be sprayed or soaked by any cleaning fluid.
- Instead, wet a cloth with the cleaning agent and carefully wipe the surfaces with it.
- The use of common surface disinfectants based on Iso-propyl alcohol (also called Isopropanol) has been evaluated from a technical properties' perspective and no severe effects to equipment should be expected.

### Note:

Some clear plastics might be affected over time, for example the LED and HMI cover on ST/STR/STB tools and push buttons on operator panels.

### Warranty impact:

The equipment is **not** tested for frequent long-term use of disinfectants. This is regarded as an extraordinary and out of the normal treatment of tools and any failures due to the excessive cleaning will not be covered by warranty.
