Which Audit is Right For You?

The secret to getting ahead is getting started.
We know there is no such thing as one size fits all. We also know that every efficiency journey has to have a clear starting point, which then serves as the baseline or benchmark from which the rest of the journey is calculated. We know that every customer’s needs are different.

Any equipment upgrade should always come with a clear benefits payback. If we can’t show one — then don’t upgrade. That’s our simple rule of purchasing!

**Your Options Explained**

<table>
<thead>
<tr>
<th>Visual Inspection Audit</th>
<th>Data Logging Audit</th>
<th>Full-Service Audit</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>What happens?</strong></td>
<td>One of our air experts from field-sales comes to your facility and walks through the compressor room, and your facility, to analyze your air, gas or vacuum system – both the demand and supply side.</td>
<td>This non-intrusive service consists of adding a data-logging box to your equipment and monitoring and measuring the output. We log the machine’s data over a week’s period, and then create a comprehensive report illustrating your compressor, blower, or vacuum pump’s electrical usage.</td>
</tr>
<tr>
<td><strong>What do we measure?</strong></td>
<td>We will inspect all your equipment and complete a thorough check-list, which includes valve, piping, and component inspections, as well as looking at how air is used in your facility. In simple terms, this is to identify some of the ‘low-hanging fruit’ and suggest some instant improvements.</td>
<td>We suggest a range of improvements, including suggestions on instead of like how to improve the demand side and information on upgrade &amp; add-on options for the supply side. If you are an existing Atlas Copco customer with a SmartLink installation, this can be done remotely at any time – in fact, this is even done proactively!</td>
</tr>
<tr>
<td><strong>What’s the cost?</strong></td>
<td>This service is conducted completely free of charge and can be performed on any brand of equipment.</td>
<td>This service is conducted completely free of charge and can be performed on any brand of equipment.</td>
</tr>
